Helpful Definitions:

Perimenopause means “around menopause.” Also known as the “menopause transitional phase,” it refers to the years during which a person’s body makes the transition to menopause, and technically ends one year after the final menstrual period.

Menopause is the point at which a person has not had a period for twelve months. Sometimes, the entire menopause transition is also referred to as “menopause.” There’s no one, clear way to talk about this, which will come as no surprise to anyone going through it.
