

A photograph of a modern brick house. The left side features a dark grey or black vertical panel facade with a large glass window reflecting trees. The right side is a red brick wall with a unique, raised, geometric pattern. A child is riding a red bicycle on the sidewalk in front. The house has a dark grey roofline and a chimney. Power lines are visible above.

RELEASE (EUROPE & UK): MARCH 2022
RELEASE (INTERNATIONAL): MAY 2022

Creatively laying the bricks of tomorrow: how an ancient material is building the future.

The venerable brick is one of the oldest and most sustainable building materials in the world. It is simple yet versatile, modest yet resilient, global in usage yet local in appearance. Recently, young architects have been rediscovering the circular use of brick and embraced its warm, aesthetic appeal to design some of the most exciting buildings of the day.

Brick by Brick showcases the best examples of modern brick applications, with a focus on residential buildings and interiors. These forward-looking projects from around the globe push the boundaries of brick architecture and design. *Brick by Brick* reveals how traditional forms are revitalized and made contemporary, and how this LEGO block of human civilization can help build our future.

WHAT TO EXPECT

- A rich, global selection of the best recent residential projects and interiors made of brick
 - Comprehensive profiles of buildings, including descriptive texts, practical insights from the architects, professional photographs, and technical drawings and / or floor plans
 - In-depth features on outstanding architectural studios to illustrate both historical and contemporary uses of brick
 - Reflections on the versatility and sustainability of this time-honored material
